

FOT-CC Input Module Fiber Optic Contact Closure

The FOT-CC Contact Closure Input Module provides input connections to monitor the state (open/closed) of a set of dry contacts. This input signal is converted to a fiber optic signal and is transferred over one fiber to the partnered FOR-CC Contact Closure Output Module where the output is a Form-C relay. LED Indicators on the FOT-CC provide visible monitoring of the operating power and the state of the input contacts.
